**Enriching Gift's very special Plant Enzymes formulation
will easily beat all challengers!**

It will win in the oatmeal test and under the dark field microscope!

Using a dark field microscope we can look closely at live blood samples and actually see what's going on inside the blood. Here are some unhealthy conditions we see on a regular basis; even in people that think they are very healthy:

- Red blood cells sticking together (which can be caused by undigested proteins that are very sticky). Red blood cells carry oxygen but, when they are impaired, this condition can lead to poor circulation, migraine headaches and chronic fatigue.
- Cholesterol and Uric acid crystals (which can lead to arthritis or gout).
- Plaque (due to undigested fats and undigested proteins) this can lead to arteriosclerosis.

**Before and after blood tests have proven that, in a very short period,
these enzymes will produce cleaner, healthier blood!**

Symptoms such as heartburn, belching, gas, indigestion, or an upset stomach could suggest that what we've eaten is creating a burden on the digestive system. These symptoms can also mean that the immune system is going to get involved shortly in cleaning up undigested particles. Again, the immune system is weakened, which can lead directly to other serious problems.

Enriching Gifts Plant Enzymes - The most effective digestive enzyme product on the market.

- High Enzymatic Activity
- High Enzymatic Diversity
- Eight Different Natural Plant-Based Enzymes
- Active in pH range from 2 to 12
- 70 Single Ionic Form Minerals

Whether it's an enzyme delivery system for nutritional supplements or simply a digestive enzyme product to be really effective' we need high enzymatic activity and high enzymatic diversity. With this combination, we can bring our processed foods and supplements back into a ration that will benefit the digestive and immune systems!

High enzymatic diversity indicates that a formulation can complete the digestive job it is asked to do. A diverse formulation should include all necessary enzymes.

Enriching Gifts Plant Enzymes formulation contains all 8 enzymes!!!

- **Protease** – digests proteins and reduces inflammation
- **Amylase** – digests carbohydrates
- **Lipase** – digests fats
- **Cellulase** – digests fiber
- **Sucrase** – digests sugars
- **Maltase** – digests disaccharides into monosaccharides
- **Lactase** – digests lactose or milk and dairy products
- **Bromelain** – digests proteins and reduces inflammation

To top off this incredible *Enriching Gifts Plant Enzymes* formulation...**the ionic minerals carry a charge that gives the enzymes additional energy.** Using the dark field microscope...we have seen that the digestive enzymes are 2 to 3 times more active when they have these 70 single ionic form minerals.

No matter how we say it...

- There are only two types of food here on earth:
- Raw foods are foods that are enzymatic ally alive (these foods have the live enzymes that help digestion)
- Cooked and processed foods that are enzymatic ally dead or denatured (these foods stress the digestive system, the pancreas, the immune system, and much more).

In essence...what we are doing with an **enzyme delivery system** in supplements or the digestive enzyme product...is this:

- We are making absolutely sure that the **nutrients are fully broken down into the smallest possible form**, so that every cell in the human body can benefit from its nourishment.
- We are also **helping to relieve the burden on the digestive system and freeing up the immune system**...so that it can pay attention to the job it is designed to do (protect us from bacteria, fungus, viruses, and other harmful organisms that are potentially dangerous or life-threatening)!!

Plant Enzymes

"One of the most health-promoting measures that you can implement into your daily life is taking in more exogenous enzymes!"

Plant Enzymes is a full-spectrum, complete digestive formulation addressing all aspects of digestion - proteins, carbohydrates, fats, starches, sugars, soluble fibers, lactose, sugars in milk.

It is the highest Potency and Activity Formulation on the market today. Each individual ingredient is at least 3 to 10 times more concentrated than any other enzyme product, anywhere! As an example, each capsule contains 95,000 HUT of protease. Studies indicate that for many people, 90% of what they eat and ingest is not digested, absorbed, or assimilated. Tests indicate that nutritional absorption can increase by approximately 300% to 500% when Plant Enzymes are taken with meals and supplements.

Fast break capsules are utilized so that the capsules dissolve in approximately 30 to 60 seconds, releasing the powerful full-spectrum, blended enzymes and Ionic minerals, allowing them to go to work quickly in aiding the digestive process.

Because Plant Enzymes is an alkaline activated formulation, it aids in predigestion and prevention of heartburn and indigestion.

Enzymes require minerals to activate to any degree of efficiency. Very few enzyme products use any minerals at all in their formulations and, those that do generally utilize between 2 to 5 minerals. Plant Enzymes uses an exclusive source of 77 naturally occurring highly charged Ionic minerals in every 400 mg. capsule.

The formulation utilized by Plant Enzymes is so effective that it has been shown to increase White Blood Cell activity by 700% and T-Cells production and activity by 1,300%.

These 77 Ionic Minerals are unique in that they carry a very high frequency charge from nature - this is extremely rare. Ionic minerals mean that they are derived from a source (mostly plants) that at one time or another was alive. Ionic also means that it is broken down to absolutely its smallest form. Ionic minerals are in many cases thousands of times smaller than colloidal minerals.

Another difference is that colloidal minerals are normally negatively charged, thereby making it nearly impossible for them to be absorbed because the small intestine where absorption occurs is also negatively charged.

Compared to colloidal or chelated minerals, Ionic Minerals are the most effective, readily assimilated and safest mineral source known today. All of the naturally occurring trace amounts of Ionic minerals contained in Plant Enzymes are known to be beneficial to the health of humans and animals.

The unique Ionic mineral combination of Plant Enzymes allows the enzymes to activate to a much higher activity level and sustain that activity for a significantly longer period of time, in many cases hours longer.

The more we become Enzyme deficient, the faster we age. The more we can build up our Enzyme Reserve, the healthier we will be!

AVOID ENZYME DEPLETION – Take 1 or 2 capsules of Plant Enzymes with 8 ounces of water before each meal as a dietary supplement. 1 or 2 additional capsules with a full glass of water may be taken before bed for additional benefits. Feel better, be better, and look better within the next 90 days! The key is consistency in daily supplementation.
