

# Enriching Gifts Plant Enzymes

***Enriching Gifts Plant Enzymes very special formulation will easily beat all challengers!***

***It will win in the oatmeal test and under the dark field microscope!***

Using a [dark field microscope](#) we can look closely at live blood samples and actually see what's going on inside our blood. Here are some unhealthy conditions we see on a regular basis, even in people that think they are very healthy:

- Red blood cells sticking together (which can be caused by undigested proteins that are very sticky). Red blood cells carry oxygen but, when they are impaired, this condition can lead to poor circulation, migrain headaches and chronic fatigue.
- Cholesterol and Uric Acid Crystals (which can lead to arthritis or gout).
- Plaque (due to undigested fats and undigested proteins) this can lead to arteriosclerosis.

**Before and after blood tests have proven that, in a very short period, the Enriching Gifts Plant Enzymes will produce cleaner and healthier blood!**

Symptoms such as heartburn, belching, gas, indigestion, or an upset stomach could suggest that what we've eaten is creating a burden on the digestive system. These symptoms can also mean that the immune system is going to get involved shortly in cleaning up undigested particles. Again, the immune system becomes weakened, leading directly to other serious problems.

[Enriching Gifts Plant Enzymes](#) are the most effective digestive enzyme product on the market.

- High Enzymatic Activity
- High Enzymatic Diversity
- Eight Different Natural Plant-Based Enzymes
- Active in pH range from 2 to 12
- 70 Single Ionic Form Minerals

Whether it's an enzyme delivery system for nutritional supplements or simply a digestive enzyme product to be really 'effective' we need high enzymatic activity and high enzymatic diversity. With this combination, we can bring our processed foods and supplements back into a ration that will benefit the digestive and immune systems!

High enzymatic diversity indicates that a formulation can complete the digestive job it is asked to do. A diverse formulation should include all necessary enzymes.

[Enriching Gifts Plant Enzymes](#) formulation contains the following;

- Protease – digests proteins and reduces inflammation
- Amylase – digests carbohydrates
- Cellulase – digests fiber
- Lipase – digests fats
- Sucrase – digests sugars
- Maltase – digests disaccharides into monosaccharides
- Lactase – digests lactose or milk and dairy products
- Galactosidase – breaks down gas
- Bromelain – digests proteins and reduces inflammation

To top off this incredible [Enriching Gifts Plant Enzymes](#) formulation it also includes a proprietary blend of 77 ionic-form trace minerals that carry a charge that gives the enzymes additional energy. Using a [dark field microscope](#) we have seen that the digestive enzymes are 2 to 4 times more active when they have these ionic form minerals.

There are only two types of food here on earth;

1. Raw foods that are foods that are enzymatically alive (these foods have live enzymes that will help digestion)
2. Cooked and processed foods that are enzymatically dead or denatured (these foods stress the digestive system, pancreas, immune system and much more).

In essence what we are doing with an enzyme delivery system in supplements or the digestive enzyme product is this:

- We are making absolutely sure that the nutrients are fully broken down into the smallest possible form, so that every cell in the human body can benefit from its nourishment.
- We are also helping to relieve the burden on the digestive system and freeing up the immune system so that it can pay attention to the job it is designed to do (protect us from bacteria, fungus, viruses, and other harmful organisms that are potentially dangerous or life-threatening)!

### [Enriching Gifts Plant Enzymes](#)

“One of the most health-promoting measures that you can implement into your daily life is taking in more exogenous enzymes!”

[Enriching Gifts Plant Enzymes](#) are a full-spectrum, complete digestive formulation addressing all aspects of digestion – proteins, carbohydrates, fats, starches, sugars, soluble fibers and lactose.

It is the highest potency and activity formulation on the market today. Each individual ingredient is at least 3 to 10 times more concentrated than any other enzyme product, anywhere! As an example, each capsule contains 75,000 HUT of protease. Studies indicate that for many people, 90% of what they eat and ingest is not digested, absorbed or assimilated. Tests indicate that nutritional absorption can increase by approximately 300% to 500% when [Enriching Gifts Plant Enzymes](#) are taken with meals.

The [Enriching Gifts Plant Enzymes](#) uses a specially designed capsule that is not fully gelatin or vegan. These are called 'fast break' capsules that dissolve in as little as 30-60 seconds. This allows the powerful full-spectrum, blended enzymes and ionic minerals to go to work much more quickly than other types of capsules.

Because the [Enriching Gifts Plant Enzymes](#) formulation is alkaline activated, it aids in predigestion and prevention of heartburn and indigestion.

Enzymes require minerals to activate to any degree of efficiency. Very few enzyme products use any minerals at all in their formulations and those that do generally utilize between 2 to 5 minerals. The [Enriching Gifts Plant Enzymes](#) use an exclusive source of 77 naturally occurring highly charged ionic minerals in every 400 mg capsule.

The formulation [found in Enriching Gifts Plant Enzymes](#) is so effective that it has been shown to increase white blood cell activity by 700% and T-Cell production and activity by 1,300%.

These 77 Ionic Minerals are unique in that they carry a very high frequency charge from nature – this is extremely rare. Ionic minerals mean that they are derived from a source (mostly plants) that at one time or another was alive. Ionic also means that it is broken down to absolutely its smallest form. Ionic minerals are in many cases thousands of times smaller than colloidal minerals.

Another difference is that colloidal minerals are normally negatively charged, thereby making it nearly impossible for them to be absorbed because the small intestine where absorption occurs is also negatively charged.

Compared to colloidal or chelated minerals, Ionic minerals are the most effective, readily assimilated and safest mineral source known today. All of the naturally occurring trace amounts of Ionic minerals contained in the [Enriching Gifts Plant Enzyme](#) formulation are known to be beneficial to the health of humans and animals.

The unique Ionic mineral formulation of the [Enriching Gifts Plant Enzymes](#) allows the enzymes to activate to a much higher activity level and sustain that activity for a significantly longer period of time, in many cases hours longer.

The more we become enzyme deficient, the faster we age. The more we build up our enzyme reserve, the healthier we become!

### **Avoid Enzyme depletion!**

Take 2 capsules of [Enriching Gifts Plant Enzymes](#) with 2 ounces of room temperature water (just enough to swallow) before each meal as a dietary supplement. 2 capsules may be taken before bed for additional benefits. Feel better, be better and look better within the next 90 days! The key is consistency in daily supplementation.
